

## *Horseshoe Bay*

Horseshoe Bay is an iconic destination and one of Queensland's best kept secrets. The bay is framed by giant granite outcrops protecting a 150m long cove, full of natural underwater wonders and a man-made sculpture. Snorkel off both sides of the bay and you will see different species of corals and fish around the rocks.

- **High tide** will give you best access to fish and corals around the rocks on both sides of the bay.
- **Low tide** provides better access to the corals and marine life in the centre of the bay itself.
- **'Bywa'**, the man-made sculpture, is situated a little off the rocks on the right-hand side of the bay, with signage on the beach telling its story. Visible at low tide.

## *Murray Bay*

Murray Bay is a secluded area with access via dirt Murray Bay Road. The pristine beach is lined with coconuts and has lower foot traffic than the other beaches.

- Follow the walking track from the car park around to Murray Bay to avoid private land.
- Corals are further out from the beach.
- Snorkel past the rocks on the right-hand side and you will find some fantastic corals.
- Diverse range of corals on the left-hand side of the bay as well.

## *Rose Bay*

Beautiful beach area with beautiful corals in one to two metres of water at low tide.

- Rocks to the left of the bay hold some gorgeous corals and critters. Best viewed at low tide.
- Some past cyclone damage may still be seen but, if you come across it, keep going and you will get to the good spots.
